*Development that respects people, the environment and local economies.
Nukutepipi Atoll is committed to reducing its environmental footprint,
to increase the sustainability of the services it offers, to take care of its
employees and customers and to help the local communities.*

PRODUCTION AND ENERGY CONSERVATION

The atoll is equipped with 1114 solar panels for a surface of 1800 M2
Storage on 360 2-volt batteries.

RECYCLING AND WASTE REDUCTION

- Waste sorting according to the standards of the SEP (Polynesian Environment Society)
- Evacuation of all bulky and special waste according to SEP standards
- Production of compost with the help of an Eco-digester and a vegetable shredder
- Partial feeding of our layer hen farm with our food waste
- Starting in 2021 a vermicomposting process (which consists of placing earthworms in a container that feed on waste, their excrement accumulating and constituting the vermicompost of the consistency of a soil and without odor)
- Plastic Reduction Policy. Phasing out of water fountains to use only our drinking water system

Nukutepipi 

ENVIRONMENTAL PROTECTION

- We offer environmentally friendly sun protection products and all our hygiene products (soaps, shampoos, deodorants, toothpastes...) are labeled "Organic"
- Nukutepipi has an ERP (Environmental Protection Plan) for companies and service providers working on the atoll: (introduction of pests, waste management, impact on water (freshwater duckweed and lagoon), preservation of natural populations and the plant ecosystem, air quality, use of fossil fuels...)
- Preservation of the freshwater duckweed that is present in the soil of the main motu
- Systematic reminder of the rules of "good conduct" to all visitors upon arrival

HEALTHY, SUSTAINABLE & RESPONSIBLE FOOD

- Fruit and vegetable production. We have three growing methods:
- Growing in window boxes (90 boxes representing a useful agricultural area of 250m²)
- 2000m² of hydroponic crops in a pesticide-free greenhouse
- Orchard: objective of 1000 productive fruit trees in 2030
- Egg production with a farmyard of 200 laying hens
- Production of honey and products derived from the hive (13 hives)
- Fishing by hotel employees represents 50% of fish consumption (outside rental periods)
- Vanilla plantation (first harvest planned for early 2023)
- Nukutepipi is self-sufficient (outside the rental periods) in eggs, honey, salads, cucumbers, herbs, papayas, bananas and coconuts.

Nukutepipi 

WATER MANAGEMENT

- Collection and use of rainwater (5 tanks for a total of 2 460 M3)
- Production of drinking water (up to 10M3 per day) using a solar osmosis unit

SOCIAL RESPONSIBILITY

- Focusing on local employment
- Training opportunities to develop skills in the hotel sector.
- Use of local service providers in several sectors: tour operators, transporters, craftsmen, etc.

TO ENCOURAGE VISITORS TO GET INVOLVED

- Raising awareness of water use among all people staying on the Atoll.
- Atoll tour : to discover the island and its natural spaces, its fauna and flora.
- And... Immersive experience on a unique Atoll in the world!
